

CERTIFICATE OF COMPLIANCE – Halogen/Antimony-Free Declaration –

As a company committed to environmental sustainability, Nexperia B.V. actively works to reduce the use of halogenated flame retardants and antimony oxides in its products. Our goal is to develop products free from these substances, provided that suitable alternatives exist, and such changes do not compromise our stringent quality standards. Consequently, a significant portion of our semiconductor products align with Nexperia's Halogen-Free definition, which specifies:

- Antimony oxides must be below 900 ppm in each homogeneous material.
- The total chlorine and bromine content must not exceed 900 ppm at the homogeneous material level.¹

Products that comply with Nexperia's Halogen-Free standard are clearly identified by the "HALOGEN FREE" logo on the identification label applied to the packaging. To ensure transparency and compliance, Nexperia provides product composition declarations on its public website, see for example: [nexperia.com/chemical-content/BAS16-Q.html](https://www.nexperia.com/chemical-content/BAS16-Q.html)

The signature below confirms that the above statements, including any product composition data, are valid and accurate to the best of our knowledge. Nexperia has implemented robust compliance systems to ensure adherence to global environmental regulations and laws. However, not all materials in our products may have been independently verified for substance content. In the event of any disputes or liabilities arising from the information in this document, Nexperia's standard terms and conditions of sale shall apply, unless an alternative contractual agreement has been established in writing by both parties.

Dr. Timo Stein
Manager ECO-Products
Nexperia B.V.

¹ Nexperia's standard is stricter than IEC 61249-2-21, which allows 900 ppm for chlorine and bromine individually and a combined total of 1,500 ppm for both halogens.
